

Yousef Osama AbdElhameed

Cybersecurity Engineering Student · SOC Analyst & Defensive Security

Cairo, Egypt · y3usef.osama@email.com · LinkedIn · GitHub · TryHackMe

Summary

Cybersecurity Engineering student building toward SOC Analyst and defensive-security roles. Hands-on attack-and-detection labs with Splunk, Snort, Linux, Kali Linux and VMware. Offensive-security training informs log analysis, incident investigation and bounded response. Project work spans network security, application security, system architecture and graphics.

Education

Egyptian Chinese University (ECU) — Cairo, Egypt

B.Sc. Computer Science · Cybersecurity Engineering

September 2023 – Expected July 2027

Technical Skills

SIEM & detection: Splunk (SPL, ingestion, dashboards, alerts, investigations), IBM QRadar (basic), Snort

SOC & monitoring: log analysis, incident investigation, Sysmon, Windows Event Logs, MITRE ATT&CK

Offensive: Nmap, Burp Suite, Metasploit, Nessus, Netcat, SQLMap, John the Ripper

Web & network: OWASP Top 10, SQLi, XSS, SSRF, IDOR, JWT, privilege escalation, reconnaissance

Programming & scripting: Python, C++; Bash, PowerShell (working familiarity)

Systems: Linux, Windows, VMware, UFW, nftables, Splunk Universal Forwarder, Wireshark, FTK Imager, Autopsy

Selected Projects

NetShield — SOC Attack & Detection Home Lab

2026 · V2 October | Project author · individual university project

- One project: NetShield with its broader SOC Attack & Detection Home Lab context.
- V2 Python/Flask console: durable alerts, incidents, flow evidence, 25 versioned indicators and 33 offline scenarios. Manual nftables response has expiry, rollback and kernel readback; observe-only is the default.
- The surrounding isolated multi-VM lab includes Kali, Ubuntu, Metasploitable, Splunk ingestion and SPL investigations. Offline replay cannot authorize live response.

Python / Flask / Scapy / SQLite / Linux / nftables

E-Banking Security System — NeuralGuard · university prototype

Oct. – Dec. 2025 | University project

- First place — ECU Project Day, December 30, 2025.
- Evaluated XGBoost on 24.4M transactions: CV-reported 94.69% ROC-AUC, a dataset result rather than a production guarantee.
- JWT, OTP authentication, RBAC, rate limiting, audit logging and transaction monitoring in a university prototype.

Python / React / XGBoost / Kafka / Spark

SHIFAA — Graduation project · proposed architecture

2026 – Present | Product Owner, Team Lead & Architecture Lead

- Leading a six-person team; own scope, architecture, security requirements and delivery coordination.
- Ongoing graduation project connecting Egyptian patients and care providers; architecture remains a proposed design, not a deployment claim.

TypeScript / System architecture / Security requirements / Product ownership

More from the Workshop

Solar Odyssey — Scientific exploration sandbox

2026 | Project author

- A solar-system sandbox with 31 celestial bodies, free-flight exploration, visual layers and a photo mode.
- A downloadable Windows release. Educational and stylized; not a precision ephemeris instrument.

C++17 / OpenGL 4.5 / CMake / Ninja

Al-Tayyibat — Arabic food-reference PWA

2026 | Project author

- An Arabic, right-to-left food reference documenting a diet's rules across 385 food entries.
- A public static PWA with a printable guide. A reference to documented diet rules, not individualized medical advice.

TypeScript / React / Vite / PWA

MEC — MSI EC Control Center — msi-ec-tui

2026 | Project author

- A capability-aware Linux terminal interface for supported MSI embedded-controller hardware.
- Release archives and Linux packages are published with checksums. Hardware support depends on the detected device and driver.

Rust / Cargo / Linux sysfs / TOML

This portfolio — Three dimensions, one person

2026 | Owner & builder

- The site you're exploring: technical, editorial and personal experiences over one source of truth.
- Three designed experiences over one shared project and credentials system. Prepared for GitHub Pages publication.

React / TypeScript / Vite / Framer Motion

Professional Training

SOC Analyst Diploma — Tier 1 · AMIT Learning · 160 hours

December 2025 – June 2026 · Completed

SOC operations, incident response, threat hunting, malware analysis, digital forensics, Splunk and IBM QRadar.

Red Teaming & Ethical Hacking Diploma · Red Nexus

July 2025 – April 2026 · Completed

Web/network penetration testing, Active Directory, privilege escalation, code review and post-exploitation.

Penetration Testing Student — eJPTv2-Aligned · Hossam Ayman Shady · 50.5 hours

April 2026 · Udemy course completion; not an INE eJPT certification.

Palo Alto Network Security Fundamentals · Innovera / Palo Alto Networks Cybersecurity Academy · 40 hours

Completed: Academy certificate September 8, 2026, validation m8PPpCI5P7.

Innovera Academy completion certificate confirms the same 40-hour training; no date or ID printed. Hours counted once.

TryHackMe learning paths · Pre Security (June 2026, 19h 10m) and Cyber Security 101 (July 2026, 45h 23m) · Completed.

Achievements & Contribution

1st Place — HACKARENA-ECU Cyber Security Competition · Team Dali Exploit · May 2026

1st Place — ECU Project Day · E-Banking Security System · December 30, 2025

Honorable Mention — ICPC ECPC Qualifications · July 2024

Certificate of Contribution — Microsoft Student Clubs, ECU · HR Team Member · 2024–2025
